# MINI-DRONE 자율비행 경진대회

TELLO - 이미지를 통한 드론 제어

#### ◆ 제어 목표

- 1) takeoff
- ② 오른쪽으로 1칸(O.2m) 씩 이동하며 빨간색 탐색
- ③ 빨간색 발견 시 위로 1칸 씩 이동하며 초록색 탐색
- ④ 초록색 발견 시 오른쪽으로 1칸 씩 이동하며 파란색 탐색
- ⑤ 파란색 발견 시 land

## (3회차 1강) 드론 이미지의 RGB 임계값 찾기

#### ◆ 3가지 색의 임계값을 찾기

#### STEP 1. Takeoff

```
2 - drone = ryze();
3 - cam = camera(drone);
4
5 % (1) takeoff
6 - takeoff(drone);
7 - pause(5);
```

#### STEP 2. 오른쪽으로 1칸(O.2m) 씩 이동하며 빨간색 탐색

```
% (2) moveright & search red color
10 -
           while 1
11 -
               moveright(drone, 'Distance', 0.2);
12 -
              pause(3);
14 -
              frame = snapshot(cam);
15 -
               pause(2);
16
17 -
              hsv = rgb2hsv(frame);
18 -
              h = hsv(:,:,1);
19 -
               detect_red = (h>1)+(h<0.05);
             if sum(detect_red, 'all') >= 17000
21 -
                   % red color detected
23 -
                   break
24 -
               end
25 -
           end
```

#### STEP 3. 빨간색 발견 시 위로 1칸 씩 이동하며 초록색 탐색

```
27
            % (3) moveup & search green color
28 -
            while 1
29 -
                moveup(drone, 'Distance', 0.2);
30 -
                pause(3);
32 -
               frame = snapshot(cam);
               pause(2);
33 -
34
               hsv = rgb2hsv(frame);
               h = hsv(:,:,1);
37 -
                detect_green = (0.275<h)&(h<0.325)
38
39 -
               if sum(detect_green, 'all') >= 14000
40
                    % green color detected
                    break
                end
43 -
            end
```

#### STEP 4. 초록색 발견 시 오른쪽으로 1칸 씩 이동하며 파란색 탐색

```
% (4) moveright & search blue color
47 -
            while 1
48 -
                moveright(drone, 'Distance', 0.2);
49 -
               pause(3);
51 -
              frame = snapshot(cam);
52 -
               pause(2);
54 -
              hsv = rgb2hsv(frame);
55 -
              h = hsv(:,:,1);
                detect\_blue = (0.575 < h) & (h < 0.625);
56 -
58 -
              if sum(detect_blue, 'all') >= 15000
                    % blue color detected
60 -
                    break
61 -
                end
62 -
            end
```

STEP 5. Land

64 % (5) land 65 - land(drone);

◆ 전체 코드 – try catch 문 이용

```
1 –   □ try
            drone = rvze();
3 -
            cam = camera(drone);
5
            % (1) takeoff
6 -
            takeoff(drone);
            pause(3);
8
9
            % (2) moveright & search red color
10 -
            while 1
11 -
                moveright(drone, 'Distance', 0.2);
12 -
                pause(3);
13
14 -
                frame = snapshot(cam);
15 -
                pause(2);
16
17 -
                hsv = rgb2hsv(frame);
18 -
                h = hsv(:,:,1);
19 -
                detect_red = (h>1)+(h<0.05);
20
21 -
                if sum(detect_red, 'a||') >= 17000
22
                    % red color detected
23 -
                    break
24 -
                end
25 -
            end
```

```
27
             % (3) moveup & search green color
28 -
             while 1
29 -
                 moveup(drone, 'Distance', 0.2);
30 -
                 pause(3);
31
32 -
                frame = snapshot(cam);
33 -
                 pause(2);
34
35 -
                hsv = rgb2hsv(frame);
36 -
                h = hsv(:,:,1);
37 -
                detect\_green = (0.275 < h) & (h < 0.325);
38
39
                if sum(detect_green, 'all') >= 14000
40
                     % green color detected
41 -
                     break
42 -
43 -
44
45
46
            % (4) moveright & search blue color
47 -
             while 1
48
                 moveright(drone, 'Distance', 0.2);
49 -
                 pause(3);
50
51 -
                frame = snapshot(cam);
52 -
                 pause(2);
53
54 -
                hsv = rgb2hsv(frame);
55 -
                h = hsv(:,:,1);
                 detect\_blue = (0.575 < h) & (h < 0.625);
56 -
57
58 -
                if sum(detect_blue, 'all') >= 15000
59
                     % blue color detected
60 -
                     break
61 -
                 end
62 -
             end
```

```
64 % (5) land

65 - land(drone);

66

67

68 - catch error

69 - disp(error);

70 - clear;

71

72 - end
```
